

Seals product range

Customized machined seals

ECONOMOS

Contents

The SKF brand now stands for more than ever before, and means more to you as a valued customer.

While SKF maintains its leadership as the hallmark of quality bearings throughout the world, new dimensions in technical advances, product support and services have evolved SKF into a truly solutions-oriented supplier, creating greater value for customers.

These solutions encompass ways to bring greater productivity to customers, not only with breakthrough application-specific products, but also through leading-edge design simulation tools and consultancy services, plant asset efficiency maintenance programmes, and the industry's most advanced supply management techniques.

The SKF brand still stands for the very best in rolling bearings, but it now stands for much more.

SKF Economos – your flexible partner

SKF Economos is the leading player in the global custom-made machined seals market. Specialised in providing a complete sealing service to various industries, its subsidiaries and partners serve many countries around the world.

For its own subsidiaries, branch production sites and partner companies, SKF Economos develops turnkey CNC-controlled seal production units to enable local production of a wide range of seals. These manufacturing facilities are designed to provide truly local service being very close to the end customer.

Seals

With more than 20 years of experience SKF Economos is offering sealing solutions tailored to customer needs. With partnership from the design phase to serial production, SKF Economos is able to provide

- in-time manufacturing of seals and components up to 4 000 mm diameter
- more than 175 standard seals and tailor-made solutions
- unique production process from machining the single piece to moulding high quantities
- all seals in a wide range of materials covering tailor-made polyurethanes, standard and high performance elastomers as well as thermoplastics

Advanced engineered plastics products

SKF Economos is specialised in advanced engineered plastics products (AEPP). The offer goes from turned, milled and moulded parts to advanced and standard engineered plastic parts, using either in-house developed range of materials or materials from qualified suppliers.

Other business and services

SKF Economos also offers customers maintenance and repair of cylinders, gaskets and other products in miscellaneous materials by water-jet-cutting technology.

Furthermore, a wide range of semi-finished materials is available and material specialists can help customers to choose the best material for specific applications.

Sealing materials introduction

Due to increasing requirements within sealing technology, the importance of selecting the appropriate sealing material is emphasized.

Sealing materials are facing higher temperatures and pressures, higher sliding speeds and poorer lubricating fluids. The new generation of fluids like HFA and HFB fluids and biologically degradable hydraulic fluids (vegetable oils and synthetic esters) present new challenges to develop new sealing materials.

SKF Economos acknowledged this with the transfer of R&D from a standard solution provider to a developer of special, tailor-made solution. It became obvious that projects in close client co-operation succeeded best in achieving the optimal sealing solution.

SKF Economos has recognised all the advantages of Polyurethane in sealing technology. From our point of view, the superior characteristics of these materials have not yet been fully explored and leave scope for many other applications. In the future we expect a much stronger trend in this direction.

SKF Economos offers 15 standard materials that are featured in this brochure. All these materials have been developed by SKF Economos to meet standard customer needs. In addition, we supply special materials like SKF ECOFLAS, engineering thermoplastics

like SKF ECOTAL and high-temperature plastics, e.g. PPS, etc.

Classification of sealing materials

In sealing technology, mainly two groups of macromolecular (polymer) substances are used: elastomers and thermoplastics.

Macromolecular substances are organic compounds, its molecules consist of several thousands, often even millions of atoms, known as macro, giant, string or chain molecules. They can be created either by modification of highly molecular natural materials (e.g. natural rubber) or by depositing low-molecular elements (so called monomers) through various chemical reactions (synthetic materials, plastics).

Elastomers

Elastomers are materials that can be highly expanded by exerting relatively little power. Because of their structure, elastomers have a high retractibility, which means the compression set is very limited. There are two

main groups of elastomers; rubber materials and thermoplastic elastomers.

The rubber materials are polymers, which are formed by chemically cross-linked macromolecules with various vulcanization additives. Due to their chemical bonds they do not melt but rather begin to decompose at high temperatures. The cross-links also results in that the rubber materials don't dissolve or, depending on the medium, swell or shrink.

Thermoplastics

The Thermoplastic Elastomers demonstrate the characteristic properties of elastomers over a wide temperature range, but with the processing behaviour of thermoplastics. They can be melted at high temperature and can be processed with traditional thermoplastic processing techniques. Thermoplastic elastomers are soluble and they generally swell less in comparison to their chemically cross-linked equivalents.

Engineering Thermoplastics are e.g. SKF ECOTAL, SKF ECOMID, SKF ECOFLON and SKF ECOPAEK.

Thermoplastics can be melted. They are polymer materials, which are essentially harder and rigid at their application temperature compared to elastomers. Depending on the chemical structure, the properties vary from hard, to stiff, to ductile and flexible. Due to the morphological structure, extensive stretching is non-reversible and moulded parts remain in the deformed state. Thermoplastics are therefore called Plastomers.

Engineering Thermoplastics are applied in the sealing technology for back-up rings and guide rings, bearing bushes, etc.

SKF Economos standard sealing materials

Polyurethanes

ECOPUR (TPU) green

ECOPUR is a thermoplastic polyurethane elastomer, with an excellent abrasion resistance, low compression set, high physical properties and tear strength. ECOPUR is mostly used for U-cup seals, lip seals, wipers and chevron packings, but it may also be used for dampers and other machined parts. Products made from this material can be used in mineral oil, in water up to 40 °C and in bio-degradable hydraulic oils like vegetable oils and synthetic esters up to 60 °C (in these hydraulic fluids it is better to use H-ECOPUR instead of ECOPUR). Depending on the seal design and the installation housing seals made of ECOPUR can be used up to 400 bar (for higher pressure anti-extrusion-rings are required).

H-ECOPUR (TPU) red

H-ECOPUR is a hydrolysis-resistant thermoplastic polyurethane elastomer. It combines the engineering properties of ECOPUR with a high resistance to hydrolysis (degradation in water) which is otherwise rare when it comes to polyurethane's. E.g. it is stable in water up to +90 °C and has an outstanding stability in mineral oil. Because of its resistance to hydrolysis H-ECOPUR can be used for water hydraulic and for applications in mining, tunnelling and manufacturing of presses. H-ECOPUR is particularly recommended for the use in pure and seawater, for HFA and HFB fluids and biologically degradable hydraulic fluids (vegetable oils and synthetic esters) and food articles. H-ECOPUR is in conformance with various food regulations and can be used for many food-, beverage- and healthcare applications.

G-ECOPUR (CPU) red

G-ECOPUR is a cast hydrolysis-resistant polyurethane elastomer with similar properties to H-ECOPUR especially regarding its chemical

stability. G-ECOPUR can be used in the same hydraulic fluids as H-ECOPUR. Generally, G-ECOPUR is used for seals with a diameter range from 600 mm up to 4 000 mm.

T-ECOPUR (TPU) blue

T-ECOPUR is a thermoplastic polyurethane elastomer, that has been developed for low temperature applications. The properties of T-ECOPUR are similar to those of ECOPUR, but the minimum service temperature is extended to -50 °C. For that reason T-ECOPUR should be used under severe climatic conditions and for applications in freezing plants.

S-ECOPUR (TPU) grey

The new polyurethane brand has been optimised in regard of the tribological characteristics (friction and wear), achieved by an addition of a synergetic combination of solid lubricants. This special material is therefore best suited for most severe applications in the water hydraulics as well as in the non-lubricated pneumatics.

Hard grade polyurethanes

X-ECOPUR (TPU) dark green

X-ECOPUR is a thermoplastic polyurethane elastomere developed by SKF Economos. The composition of the material provides outstanding friction and wear properties as well as high pressure resistance. Therefore the material is well suited for the use as a composite seal, for wipers working in heavy-duty applications as well as for engineered plastic parts that need high elasticity and superior resilience behaviour.

Due to the exceptional extrusion resistance seals made of this material are working at higher pressure levels and larger clearances than those made of standard polyurethanes and PTFE compounds.

XH-ECOPUR (TPU) dark red

Compared to the standard grade H-ECOPUR, XH-ECOPUR has a significantly higher hardness. The composition of the material based on special raw materials provides outstanding friction and wear characteristics as well as pressure resistance. This material exhibits an outstanding chemical and hydrolysis resistance for applications in mineral oil, biodegradable hydraulic fluids (HETG and HEES, etc.) and water based fluids (HFA and HFB).

XS-ECOPUR (TPU) dark grey

Compared to the S-ECOPUR standard material XS-ECOPUR has a higher hardness and therefore further improved sliding properties. XS-ECOPUR has a better extrusion resistance than the standard material and therefore sealing elements of this material can be used at higher pressures, assuming the same profiles are used. XS-ECOPUR should be used instead of X-ECOPUR and XH-ECOPUR under poor lubricated working conditions. The material can also withstand dry-running depending on the overall service conditions.

Elastomers

SKF ECORUBBER-1 (NBR) black

SKF ECORUBBER-1 is an elastomer based on acrylonitrile-butadiene rubber and is used for U-cup seals, chevron packings, special seals and various components. This material has good resistance to mineral oils and greases and HFA, HFB and HFC pressure fluids. However, the material is not resistant to glycol-based brake fluids, HFD fluids, aromatic fluids (such as benzene), esters, ketones and amines or concentrated acids and bases.

SKF ECORUBBER-H (HNBR) black

SKF ECORUBBER-H is a hydrogenated or saturated acrylonitrile-butadiene rubber, suitable for applications in aliphatic hydrocarbons like propane or butane and mineral oils and greases (for short times up to 170 °C) and for sulfonated crude oil. Furthermore, it can be used in many diluted acids and bases and salt solutions even at elevated temperatures and in glycol-water mixtures. SKF ECORUBBER-H is not compatible with fuels with high content of aromatic hydrocar-

bons (premium blend petrol), gasolines (petrol/alcohol blends) ketones, esters, ethers and chlorinated hydrocarbons like trichloroethylene and tetrachloroethylene.

SKF ECORUBBER-2 (FPM, FKM) brown

SKF ECORUBBER-2 is an elastomer based on fluororubber (VITON®) that can be used for U-rings, lip seals, chevron packings, wipers and special seals. Its outstanding properties are high resistance to heat, weathering, ozone and many other chemicals.

SKF ECORUBBER-2 is compatible with mineral oils and greases containing sulphur, HFD pressure fluids (nearly all phosphate esters and chlorinated hydrocarbons), crude oil and sour gas. SKF ECORUBBER-2 is not resistant to anhydrous ammonia, amines, ketones, esters, hot water and low molecular weight organic acids.

SKF ECORUBBER-3 (EPDM) black

SKF ECORUBBER-3 is an elastomer based on ethylene-propylene rubber and can be used for U-cup seals, lip seals and chevron packings. SKF ECORUBBER-3 has an outstanding resistance to hot water, steam, washing agents and polar organic solvents. SKF ECORUBBER-3 is not resistant to mineral oil and other unpolar media. Its resistance to weathering, ozone and ageing is good. When used in glycol-based brake fluids, national regulations have to be adhered to.

SKF ECOSIL (MVQ) reddish brown

SKF ECOSIL is a silicone rubber and can be used for O-rings, gaskets and special seals. Due to its poor mechanical properties compared to those of other rubber materials, SKF ECOSIL is mostly used for static applications. SKF ECOSIL is highly resistant to weathering, ozone and ageing. Thanks to the content of aromatic hydrocarbons the material is compatible with mineral oil.

SKF ECOFLAS (TFE/P) black

SKF ECOFLAS is a unique fluoroelastomer based upon an alternating copolymer of tetrafluoroethylene and propylene (TFE/P). This material is chemically related to fluororubber. Compared to fluoro rubber materials SKF ECOFLAS shows slightly higher tensile strength and a quite similar heat resistance. The resistance of SKF ECOFLAS to mineral oils

is not as high as SKF ECORUBBER-2, but better than the mineral oil resistance of SKF ECORUBBER-1 and SKF ECORUBBER-H. SKF ECOFLAS exhibits outstanding resistance to hot water and hot steam up to 230 °C. The resistance to sourgas and amines, brake fluids (based on glycol, mineral oil or silicon oil) and fire-resistant hydraulic fluids is excellent. SKF ECOFLAS shows in contrast to SKF ECORUBBER-2 a good radiation resistance.

SKF ECOFLON 1 (PTFE-virgin) white

SKF ECOFLON 1 is a thermoplastic on the basis of polytetrafluoroethylene that is used for back-up rings, chevron packings, O-rings, rotary seals and gaskets. SKF ECOFLON 1 has the widest application range of all sealing materials. SKF ECOFLON 1 has an outstanding chemical resistance and will only be attacked by molten alkali metals and elementary Fluorine at high temperatures. Using PTFE seals, it should be noted that creeping occurs at relative low loads (pressures). SKF ECOFLON 1 is suitable for the food industry.

SKF ECOFLON 2 (PTFE +25% glass fibre + 5% MoS₂) grey

SKF ECOFLON 2 has improved compression strength as well as improved sliding properties in comparison to SKF ECOFLON 1. The chemical resistance is similar to SKF ECOFLON 1.

SKF ECOFLON 3 (PTFE +40% bronze) bronze

SKF ECOFLON 3 exhibits improved compression strength sliding properties as well as an

improved thermal conductivity in comparison to SKF ECOFLON 1.

SKF ECOFLON 4 (PTFE +25% carbon) black

SKF ECOFLON 4 shows improved mechanical strength, stiffness and hardness as well as improved sliding properties in comparison to SKF ECOFLON 1.

SKF ECOFLON 5 (PTFE modified) white

SKF ECOFLON 5 exhibits improved wear and abrasion resistance in comparison to

SKF ECOFLON 1. The material is suitable for food and beverage application.

SKF ECOTAL (POM) black

SKF ECOTAL is a semi-crystalline polyacetal-copolymer which is used for anti-extrusion rings, guide ring bushes, scrapers and for precision-machined parts with tight tolerances. SKF ECOTAL is one of the most important engineering thermoplastics with good physical properties, low water absorption and good chemical resistance. SKF ECOTAL can be used

in mineral oils, in water-based fire-resistant hydraulic fluids (HFA, HFB and HFC fluids). Concentrated acids and bases will attack and destroy it.

SKF ECOMID (PA) black

SKF ECOMID is a cast polyamide with good sliding properties and is used for back-up rings, guide rings and bearing components instead of SKF ECOTAL for a diameter above 260 mm. SKF ECOMID can be used in mineral oils and water-based fire-resistant hydraulic fluids. When designing parts out of SKF ECOMID for an application in water or water-based fluids, the swelling of the mate-

rial (SKF ECOMID absorbs water up to eight weight percent) must be taken into consideration.

SKF ECOPAEEK (PEEK) cream

SKF ECOPAEEK is a polymer with high tensile strength, stiffness, high heat distortion temperature and good sliding and friction behaviour. As far as strength and stiffness are concerned, SKF ECOPAEEK exceeds most technical plastics especially at high temperatures.

SKF ECOTEX (polyester resin + polyester fabric + graphite filler) light orange

SKF ECOTEX is a compound based on a thermosetting polyester resin and reinforced with fabric inlays. Due to the addition of graphite the material shows very good characteristics in respect to the tribological requirements of bearing materials in gliding systems. SKF ECOTEX shows high compressive strength and outstanding friction and wear properties. Therefore it is very well suited for guide rings and bearing bushes. Due to the very low absorption of moisture, SKF ECOTEX is particularly suitable for use in water and media containing water (swelling in water <0,1 %).

SKF ECOWEAR 1000 (UHMW-PE) white

SKF ECOWEAR 1000 is a semi crystalline thermoplastic material based on Polyethylene with a molecular weight of about 4 500 000 g/mol. SKF ECOWEAR 1000 has a very low coefficient of friction, an excellent wear resistance and impact strength (also at low temperature up to -200 °C), and in comparison to SKF ECOFLON a very high creep resistance and is almost water repellent and exhibits no swelling.

The main applications for SKF ECOWEAR 1000 are in areas where the following properties are required:

- outstanding sliding properties
- wear- and dry running properties in case of bad lubricating and aqueous media

Special materials

Any thermoplastic with mineral-reinforced polyamides, high temperature plastics like Polyphenylsulfide, etc.. All standard materials can be modified by SKF Economos to achieve tailor-made and optimised sealing solutions.

Static seals

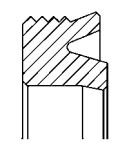

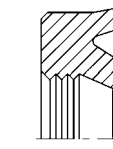

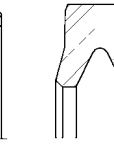

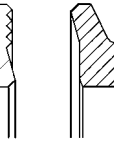

Beside the conventional O-rings and square-rings SKF Economos offers a standard range of specialised seals for static applications. Most of below listed profiles fit in standard

O-ring-grooves (housings) and can be substituted easily without any rework of housing dimensions.

Static	Profiles	Description
	  	Universal type Most common and simple seal profiles with proven reliability in multiple applications in every sector of industry.
	  	Inside sealing type Interference fit on outside diameter assures stable fit in the housing and reliable performance at all pressures.
	  	Outside sealing type Interference fit on inside diameter assures stable fit in the housing and reliable performance at all pressures.
	  	Axial sealing type Robust profiles mainly used as flange seals, inside or outside pressurization possible. Direction of pressurization (from inside or outside) must be indicated when ordering the seal.

Tailormade solutions

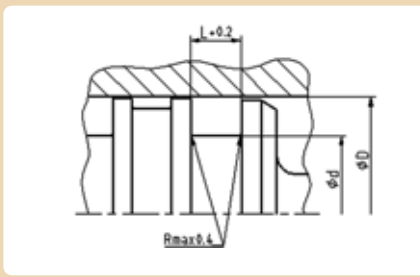

In addition to our standard range of static seals we certainly do offer special tailormade static seal profiles to satisfy the very specific needs of every customer, in every industry.

Static	Profiles	Description
	   	Tailormade solutions These special profiles are examples for our wide and flexible product range.

Piston seal housing details and recommendations

The listing beside is our suggestion for standard housing dimensions. Please note that we are able to produce those profiles to your specific need or any non standard housing.

Indicated dimensions are required to process an order:

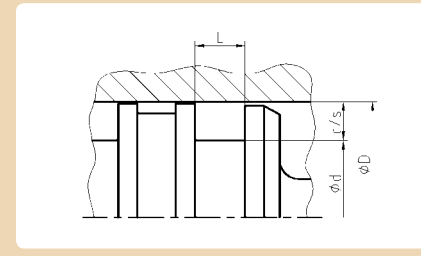

- D bore diameter
- d housing groove diameter
- L housing groove length
- c/s cross section

Surface properties		R_{tmax}	R_a
		μm	μm
Sliding surface for PU/rubber seals		$\leq 2,5$	$\leq 0,1 - 0,5$
PTFE seals		≤ 2	$\leq 0,05 - 0,3$
Groove bottom		$\leq 6,3$	$\leq 1,6$
Groove face		≤ 15	≤ 3
Bearing area T_p		50 – 95%	

Seal housing tolerances

- D H9
- d h10

Table 1

Main function:
Single-acting piston seals lip type (U-cup) seals compact seals.

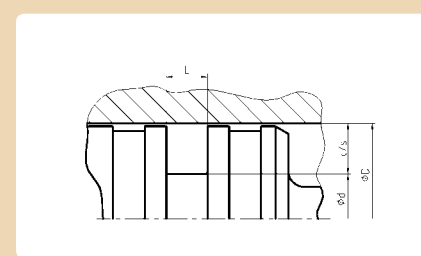

Main applications:
Support and retaining cylinders, standard cylinders.

Advantages:
Stable fit in the housing, ultimate sealing effect, wide temperature range.

Standard materials:
ECOPUR, SKF ECORUBBER (all types).

Bore diameter	Housing groove diameter		Housing groove length L	Cross section c/s
	D over	incl.		
mm	–	mm	mm	mm
14	24,9	D–8	6	4
25	49,9	D–10	7	5
50	74,9	D–12	8	6
75	149,9	D–15	10	7,5
150	299,9	D–20	12	10
300	500	D–25	18	12,5
500	750*	D–30	20	15
750*		D–40	26	20

* not all profiles available above 600mm

Main function:
Single/double-acting piston seals, o-ring activated PTFE (PU) seals.

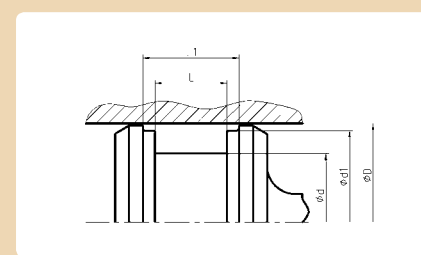

Main applications:
Standard cylinders for positioning functions, mobile hydraulics, etc.

Advantages:
Low friction, no stick-slip, excellent resistance against pressure shocks.

Standard materials:
SKF ECOFLON/NBR or SKF ECOFLON/Viton X-ECOPUR/NBR.

Bore diameter	Housing groove diameter		Housing groove length L	Cross section c/s
	D over	incl.		
mm	–	mm	mm	mm
8	14,9	D–4,9	2,2	2,45
15	39,9	D–7,5	3,2	3,75
40	79,9	D–11	4,2	5,5
80	132,9	D–15,5	6,3	7,75

Rod seal housing details and recommendations

The listing beside is our suggestion for standard housing dimensions. Please note that we are able to produce those profiles to your specific need or any non standard housing.

Table 2

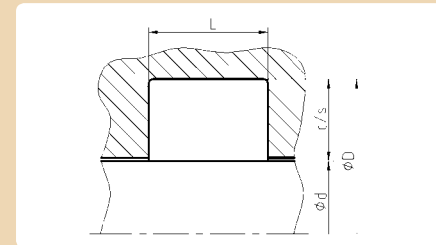

Indicated dimensions are required to process an order:

- D housing groove diameter
- d rod diameter
- L housing groove length
- c/s cross section

Surface properties	R_{tmax}	R_a
	μm	μm
Sliding surface for PU/rubber seals	$\leq 2,5$	$\leq 0,1 - 0,5$
PTFE seals	≤ 2	$\leq 0,05 - 0,3$
Groove bottom	$\leq 6,3$	$\leq 1,6$
Groove face	≤ 15	≤ 3
Bearing area T_p	50 – 95%	

Seal housing tolerances

- D f8
- d h10

Main function:
Single-acting rod seals lip type (U-cup) seals compact seals.

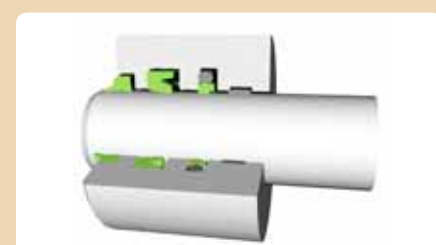

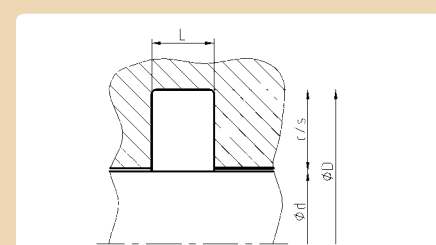

Main applications:
Standard cylinders, light and standard hydraulic applications.

Advantages:
Stable fit in the housing, ultimate sealing effect, wide temperature range, good backpumping ability.

Standard materials:
ECOPUR, SKF ECORUBBER

Rod diameter	Housing groove diameter D	Housing groove length L	Cross section c/s
d over	incl.	mm	mm
5	24,9 ¹⁾	d+8	6,3
25	49,9	d+10	8
50	149,9	d+15	10
150	299,9	d+20	14

700	1 000*	d+40	32
>1 000	>1 000*	d+40	32

* not all profiles available above 600mm

Main function:
Single/double-acting rod seals, O-ring activated PTFE (PU) seals.

Main applications:
Earth moving equipment, heavy hydraulics.

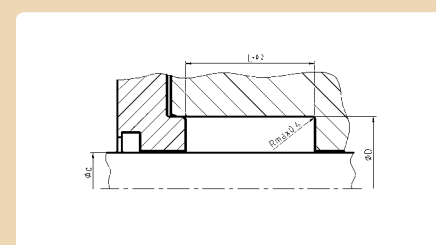

Advantages:
Excellent resistance against pressure shocks, long lifetime.

Standard materials:

- S09: SKF ECOFLON/NBR or SKF ECOFLON/Viton, X-ECOPUR/NBR
- S01: ECOPUR or SKF ECORUBBER.

Rod diameter	Housing groove diameter D	Housing groove length L	Cross section c/s
d over	incl.	mm	mm
5	7,9	d+4,9	2,2
8	18,9	d+7,3	3,2
19	37,9	d+10,7	4,2
38	199,9	d+15,1	6,3

650	1 000*	d+27,3	9,5
>1 000	>1 000*	d+27,3	9,5

* not all profiles available above 600mm

Main function:
Single-acting rod seals chevron packings.

Main applications:
Heavy industry hydraulics, presses.

Advantages:
Suitable for old, worn rods, splitted version for easy installation available.

Standard Materials:
SKF ECOPUR / SKF ECOTAL.

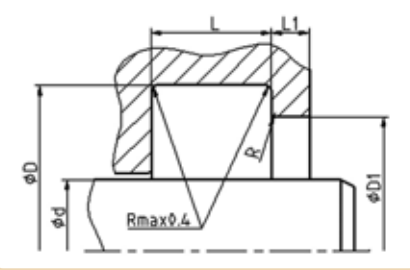

Rod diameter	Housing groove diameter D	Housing groove length L	Cross section c/s
d over	incl.	mm	mm
10	39,9	d+10	16

200	300	d+30	50
>300	>300	d+40	63

¹⁾ Restrictions in minimum diameter for profiles with back-up rings. Please consult our technical department for exact limitations.

Wiper housing details and recommendations

The listing beside is our suggestion for standard housing dimensions. Please note that we are able to produce those profiles to your specific need or any non standard housing.

Table 3

Indicated dimensions are required to process an order:

- D housing groove diameter
- d rod diameter
- L housing groove width
- H total wiper height

Surface properties		R_{tmax}	R_a
		μm	μm
Sliding surface for PU/rubber seals		$\leq 2,5$	$\leq 0,1 - 0,5$
PTFE seals		≤ 2	$\leq 0,05 - 0,3$
Groove bottom		$\leq 6,3$	$\leq 1,6$
Groove face		≤ 15	≤ 3
Bearing area T_p		50 – 95%	
Seal housing tolerances			
• D_1 H11		$L < 10 \text{ mm} +0,2$	
• D H11		$L > 10 \text{ mm} +0,3$	

A01 A04

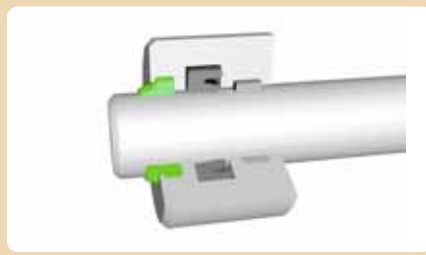

Rod diameter		Housing groove diameter		Housing groove width		Total wiper height
d over	incl.	D	D_1	L	L_1	H
mm	-	mm	-	mm	-	mm
6	100	d+8	d+6	4	1	7
100,1	149,9	d+12	d+9	5,5	1,5	10
≥ 150	≥ 150	d+15	d+11	6,5	2	13

Main function:
Single-acting wipers.

Main applications:
Standard wiper for hydraulics.

Advantages:
Easy installation (snap-in), excellent wear resistance, technically accurate closure.

Standard materials:
ECOPUR (X-) / SKF ECORUBBER.

A02 A05 A11

Rod diameter		Housing groove diameter		Housing groove width		Total wiper height
d over	incl.	D	D_1	L	L_1 min	H
mm	-	mm	-	mm	-	mm
6	49,9	d+8	d+4	5	2	8
99,9	d+10	d+5	6	2	9,7	10
≥ 100	d+15	d+7,5	8,5	2	13	13

Main function:
Single/double-acting wipers.

Main applications:
In combination with O-ring activated PTFE rod seals (S09).

Advantages:
Excellent wear resistance, double-acting function.

Standard materials:
ECOPUR (X-ECOPUR) / SKF ECORUBBER.

A03 A06

Rod diameter		Housing groove diameter		Housing groove width		Total wiper height
d over	incl.	D	D_1	L	L_1	H
mm	-	mm	-	mm	-	mm
6	9,9	d+8	-	5	-	8
10	99,9	d+10	-	7	-	10
100	200	d+15	-	9	-	12
>200	>200	d+20	-	12	-	16

Main function:
Single-acting wipers.

Main applications:
Standard hydraulic applications, pressfit for axially open housings.

Advantages:
Excellent wear resistance, plastic retainer ring, no oxidation problem between retainer and housing.

Standard materials:
ECOPUR (X-) + SKF ECOTAL / SKF ECORUBBER + SKF ECOTAL.

Rotary seal housing details and recommendations

The listing beside is our suggestion for standard housing dimensions. Please note that we are able to produce those profiles to your specific need or any non standard housing.

Indicated dimensions are required to process an order:

- D housing groove diameter
- d shaft diameter
- L housing groove length
- c/s cross section

Surface properties		R_{tmax}	R_a
		μm	μm
Sliding surface for PU/rubber seals		$\leq 2,5$	$\leq 0,1 - 0,5$
PTFE seals		≤ 2	$\leq 0,05 - 0,3$
Groove bottom		$\leq 6,3$	$\leq 1,6$
Groove face		≤ 15	≤ 3
Bearing area T_p		50 – 95%	

Seal housing tolerances

- D H8
- d f8

Table 4

R01 R02

Main function:
Single-acting rotary seals, oil seals/radial shaft seals.

Main applications:
Bearing protection.

Advantages:
Good adaptation possibilities for diverse temperatures and media.

Standard materials:
ECOPUR, SKF ECORUBBER/SKF ECOTAL, Aluminium.

Shaft diameter	Housing groove diameter		Housing groove length		Cross section
	D	D_1	L	L_1	
d over	incl.				c/s
mm	–	mm	–	mm	– mm
6	59,9	d+12	–	7	– 6
60	139,9	d+15	–	8	– 7,5
140	299,9	d+20	–	10	– 10
300	499,9	d+30	–	12	– 15
500	800	d+40	–	20	– 20
>800	>800	d+50	–	22	– 25

R09

Main function:
Double-acting rotary seal, O-ring activated PTFE seal.

Main applications:
Rotary pivots.

Advantages:
For high pressure.

Standard materials:
Ecoflon + NBR or Viton.

Shaft diameter	Housing groove diameter		Housing groove length		Cross section
	D	D_1	L	L_1	
d over	incl.				c/s
mm	–	mm	–	mm	– mm
6	18,9	d+4,9	–	2,2	– 2,45
19	37,9	d+7,5	–	3,2	– 3,75
38	199,9	d+11	–	4,2	– 5,5
200	255,9	d+15,5	–	6,3	– 7,75
256	649,9	d+21	–	8,1	– 10,5
>650	>650	d+28	–	9,5	– 14

R19

Main function:
Single-acting rotary seal, spring activated PTFE seal.

Main applications:
Bearing protection for chemical and pharma industries.

Advantages:
Low friction, good chemical and thermal resistance, suitable for high speed.

Standard materials:
Ecoflon, stainless steel spring.

Shaft diameter	Housing groove diameter		Housing groove length		Cross section
	D	D_1	L	L_1	
d over	incl.				c/s
mm	–	mm	–	mm	– mm
5	19,9	d+9	d+5	3,6	0,85 –
20	39,9	d+12,5	d+7	4,8	1,35 –
40	399,9	d+17,5	d+10,5	7,1	1,8 –
≥ 400	≥ 400	d+22	d+14	9,5	2,8 –

O-ring housing details and recommendations

Guide ring housing details and recommendations

SKF – the knowledge engineering company

From the company that invented the self-aligning ball bearing more than 100 years ago, SKF has evolved into a knowledge engineering company that is able to draw on five technology platforms to create unique solutions for its customers. These platforms include bearings, bearing units and seals, of course, but extend to other areas including: lubricants and lubrication systems, critical for long bearing life in many applications; mechatronics that combine mechanical and electronics knowledge into systems for more effective linear motion and sensorized solutions; and a full range of services, from design and logistics support to conditioning monitoring and reliability systems.

Though the scope has broadened, SKF continues to maintain the world's leadership in the design, manufacture and marketing of rolling bearings, as well as complementary products such as radial seals. SKF also holds an increasingly important position in the market for linear motion products, high-precision aerospace bearings, machine tool spindles and plant maintenance services.

The SKF Group is globally certified to ISO 14001, the international standard for environmental management, as well as OHSAS 18001, the health and safety management standard. Individual divisions have been approved for quality certification in accordance with either ISO 9001 or ISO/TS 16949.

With some 100 manufacturing sites worldwide and sales companies in 70 countries, SKF is a truly international corporation. In addition, our distributors and dealers in some 15 000 locations around the world, an e-business marketplace and a global distribution system put SKF close to customers for the supply of both products and services. In essence, SKF solutions are available wherever and whenever customers need them. Overall, the SKF brand and the corporation are stronger than ever. As the knowledge engineering company, we stand ready to serve you with world-class product competencies, intellectual resources, and the vision to help you succeed.

Evolving by-wire technology

SKF has a unique expertise in fast-growing by-wire technology, from fly-by-wire, to drive-by-wire, to work-by-wire. SKF pioneered practical fly-by-wire technology and is a close working partner with all aerospace industry leaders. As an example, virtually all aircraft of the Airbus design use SKF by-wire systems for cockpit flight control.

SKF is also a leader in automotive by-wire technology, and has partnered with automotive engineers to develop two concept cars, which employ SKF mechatronics for steering and braking. Further by-wire development has led SKF to produce an all-electric forklift truck, which uses mechatronics rather than hydraulics for all controls.

Harnessing wind power

The growing industry of wind-generated electric power provides a source of clean, green electricity. SKF is working closely with global industry leaders to develop efficient and trouble-free turbines, providing a wide range of large, highly specialized bearings and condition monitoring systems to extend equipment life of wind farms located in even the most remote and inhospitable environments.

Working in extreme environments

In frigid winters, especially in northern countries, extreme sub-zero temperatures can cause bearings in railway axleboxes to seize due to lubrication starvation. SKF created a new family of synthetic lubricants formulated to retain their lubrication viscosity even at these extreme temperatures. SKF knowledge enables manufacturers and end user customers to overcome the performance issues resulting from extreme temperatures, whether hot or cold. For example, SKF products are at work in diverse environments such as baking ovens and instant freezing in food processing plants.

Developing a cleaner cleaner

The electric motor and its bearings are the heart of many household appliances. SKF works closely with appliance manufacturers to improve their products' performance, cut costs, reduce weight, and reduce energy consumption. A recent example of this cooperation is a new generation of vacuum cleaners with substantially more suction. SKF knowledge in the area of small bearing technology is also applied to manufacturers of power tools and office equipment.

Maintaining a 350 km/h R&D lab

In addition to SKF's renowned research and development facilities in Europe and the United States, Formula One car racing provides a unique environment for SKF to push the limits of bearing technology. For over 50 years, SKF products, engineering and knowledge have helped make Scuderia Ferrari a formidable force in F1 racing. (The average racing Ferrari utilizes more than 150 SKF components.) Lessons learned here are applied to the products we provide to auto-makers and the aftermarket worldwide.

Delivering Asset Efficiency Optimization

Through SKF Reliability Systems, SKF provides a comprehensive range of asset efficiency products and services, from condition monitoring hardware and software to maintenance strategies, engineering assistance and machine reliability programmes. To optimize efficiency and boost productivity, some industrial facilities opt for an Integrated Maintenance Solution, in which SKF delivers all services under one fixed-fee, performance-based contract.

Planning for sustainable growth

By their very nature, bearings make a positive contribution to the natural environment, enabling machinery to operate more efficiently, consume less power, and require less lubrication. By raising the performance bar for our own products, SKF is enabling a new generation of high-efficiency products and equipment. With an eye to the future and the world we will leave to our children, the SKF Group policy on environment, health and safety, as well as the manufacturing techniques, are planned and implemented to help protect and preserve the earth's limited natural resources. We remain committed to sustainable, environmentally responsible growth.
